Total Marks

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Calculators may be used.**
- If your calculator does not have a  $\pi$  button, take the value of  $\pi$  to be 3.142 unless the question instructs otherwise.

### Information

- The total mark for this paper is 100
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- Questions labelled with an **asterisk** (\*) are ones where the quality of your written communication will be assessed.

### Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

\*5 Jim's pay is £180 each week.

Jim asks his boss for an increase of £20 a week.

Jim's boss offers him a 10% increase.

Is the offer from Jim's boss more than Jim asked for?

You must show your working.

$$10\% \text{ of } £180$$
$$180 \div 10 = £18.$$

A 10% pay rise is  $£180 + £18 = £198$   
but £20 per week pay rise is £200,  
so the offer Jim asks for is better.

6 There are 3 counters in a bag.

One counter is red.  
One counter is green.  
One counter is blue.

Mike takes at random a counter from the bag.  
He puts the counter back in the bag.

Then Ellie takes at random a counter from the bag.

(a) Is Ellie more likely to take a blue counter from the bag than Mike?  
You must explain your answer.

No, Ellie is not more likely to pick a blue as the probability is the same, as there are the exact same counters in. (1)

(b) Write a list of all the possible combinations of the two counters that Mike and Ellie can take.

(B,R) (B,G) (B,B) (R,G) (R,R) (G,G) (R,B)

10 You can use this rule to work out the total charge for hiring a concrete mixer.

Total charge = £30 plus £8 each day

Esme hired a concrete mixer for 4 days.

(a) Work out the total charge.

$$30 + 8 \times 4$$
$$30 + 32 = 62$$

£ 62  
(2)

William also hired a concrete mixer.

The total charge was £110

(b) Work out how many days William hired the concrete mixer for.

$$110 = 30 + 8 \times ?$$

$$110 - 30 = 80$$

$$80 \div 8 = 10$$

Check →  $30 + 8 \times 10$   
 $30 + 80 = 110$

\*12 The table gives information about the costs of posting parcels.

Maximum weight of a parcel	Cost
2 kg	£4.41
4 kg	£7.06
6 kg	£9.58
8 kg	£11.74
10 kg	£12.61
20 kg	£14.69

Umar has to post some parcels.

He has to post

- 3 parcels with a weight of 6 kg each
- 1 parcel with a weight of 10 kg
- 1 parcel with a weight of 3 kg
- 1 parcel with a weight of 1.2 kg

Umar has £55 to spend on posting the parcels.

Can he post all the parcels?

$$3 \text{ parcels @ } 6\text{kg} = £9.58 \times 3 \\ = £28.74$$

$$1 \text{ parcel @ } 10\text{kg} = £12.61$$

$$1 \text{ parcel @ } 3\text{kg} = £7.06$$

$$1 \text{ parcel @ } 1.2\text{kg} = £4.41$$

$$\text{Total cost of all parcels } £28.74 + £12.61 + \\ £7.06 + £4.41 = £52.82$$

Umar does have enough money as  
£52.82 is less than £55.

\*14 Here is a diagram of a wall.

Diagram NOT accurately drawn

Tile  $100\text{cm} = 1\text{m}$ .

Halima wants to cover all of the wall with tiles.

The tiles are squares with sides of length 20 cm.

The tiles are sold in packs.

There are 10 tiles in each pack.

Each pack of tiles costs £34.99

Halima only has £1000

Can she buy enough packs of tiles to cover the wall?

For each 1m, it will need 5 tiles ( $100 \div 20 = 5$ )

so 4m  $\rightarrow$  20 tiles

3m  $\rightarrow$  15 tiles.

So altogether  $20 \times 15 = 300$  tiles.

$300 \div 10 = 30 \rightarrow$  so she needs 30 packs of tiles.

Total cost is  $\pounds 34.99 \times 30 = \pounds 1049.70$

If Halima only has £1000 then she does not have enough money to buy the tiles she needs. She is  $\pounds 49.70$  short.

\*16 Ashley wants to buy some tins of paint.

He finds out the costs of paint at two shops.

**Paint R Us**

Normal price £2.19 a tin

**Special Offer**

Buy 2 tins at the normal price and get the 3rd tin free

**Deco Mart**

Normal price £1.80 a tin

**Special Offer**

10% off the normal price

Ashley needs 9 tins of paint.

Ashley wants to get all the tins of paint from the same shop.

He wants to pay the cheapest possible total price.

Which of the two shops should Ashley buy the paint from?

Paint R Us.

3 tins would cost  $2 \times £2.19 = £4.38$

9 tins would cost  $£4.38 \times 3 = \underline{£13.14}$

Deco Mart

9 tins at  $£1.80 = £16.20$

10% of  $£16.20 = £1.62$

$£16.20 - £1.62 = \underline{£14.58}$

Ashley should buy his paint from Paint R Us as it is  $£1.44$  cheaper than Deco Mart.

He has to lay 180 bricks.

Tom starts to lay the bricks at 9 am.  
He has half an hour break at 11 am.  
He has another half an hour break at 1 pm.

What time should Tom finish laying the 180 bricks?

From 9am until 11am is 2 hours  $\rightarrow 30 \times 2 = 60$

From 11.30am until 1pm is 1.5 hrs  $\rightarrow 30 \times 1.5 = 45$

$ABCD$  is a parallelogram.

- Angle  $ADB = 38^\circ$ .
- Angle  $BEC = 41^\circ$ .
- Angle  $DAB = 120^\circ$ .

Calculate the size of angle  $x$ .  
You must give reasons for your answer.

Angle  $DEC = 139^\circ$  because angles on a straight line add up to  $180^\circ$ .

Angle  $ADC = 60^\circ$  because co-interior angles in parallel lines add up to  $180^\circ$ .

So angle  $EDC = 22^\circ \rightarrow 60 - 38 = 22^\circ$ .

So Angle  $ECD$  must be  $19^\circ \rightarrow$  because angles in a triangle add up to  $180^\circ$ .
