

Further Maths GCSE Trigonometry Answers

1. $\tan x = \frac{12 - 5\sqrt{3}}{4\sqrt{3} - 5}$ rational denominator

$$\frac{(12 - 5\sqrt{3}) \times (4\sqrt{3} + 5)}{(4\sqrt{3} - 5)(4\sqrt{3} + 5)} = \frac{48\sqrt{3} - 25\sqrt{3} - 60 + 60}{48 - 25}$$

$$= \frac{23\sqrt{3}}{23} = \sqrt{3}$$

$$\tan x = \sqrt{3} \Rightarrow x = 60^\circ$$

~~2. Area of triangle = $\frac{1}{2}(4\sqrt{3} \times 6)(2 - \sqrt{3}) \sin A$
 $= \frac{1}{2}[8\sqrt{3} + 6\sqrt{3} - 12 - 12] \times \frac{1}{4}$
 $= \frac{1}{4}\sqrt{3}$~~

2. $\frac{\sin A}{2 - \sqrt{3}} = \frac{\sin B}{4\sqrt{3} - 6}$

$$\sin B = \frac{\frac{1}{4}(4\sqrt{3} - 6)}{2 - \sqrt{3}} \times \frac{(2 + \sqrt{3})}{(2 + \sqrt{3})}$$

$$= \frac{\frac{1}{4}(2\sqrt{3})}{1} = \frac{\sqrt{3}}{2}$$

$$\text{so } \sin B = \frac{\sqrt{3}}{2} \text{ so } B = 60^\circ$$

4. $\angle C = 120^\circ$ so $\angle DAC = 15^\circ$
 so $AC \times \sin 60 = 3\sqrt{2} \times \sin 15$ [= AB]
 $\frac{\sqrt{3}}{2} \times AC = 3\sqrt{2} \times \frac{1}{\sqrt{2}}$

$$\text{so } AC = 2\sqrt{3} \quad [\text{cos } 60 \text{ or } \sin 30]$$

$$BC = AC \times \cos 60 = 2\sqrt{3} \times \frac{1}{2} = \sqrt{3}$$

In $\triangle ABD$ using Pythagoras:

$$(3\sqrt{2})^2 = (x + \sqrt{3})^2 + 3^2$$

$$18 = x^2 + 2\sqrt{3}x + 3 + 9$$

$$x^2 + 2\sqrt{3}x - 6 = 0$$

$$x = \frac{-2\sqrt{3} \pm \sqrt{(12 + 24)}}{2} = \frac{-\sqrt{3} + 3}{2} \quad [x > 0]$$

$$CX = \sqrt{10^2 + 12^2} = 2\sqrt{61}$$

$$BX = \sqrt{14^2 - (\sqrt{61})^2} = \sqrt{135} = 3\sqrt{15} = 11.6 \text{ cm}$$

$$\cos \alpha = \frac{\sqrt{61}}{14} \quad \alpha = 56.1^\circ$$

6. Let $M =$ midpoint of AC .

$$\cos \alpha = \frac{8}{12} \Rightarrow \alpha = 48.2^\circ$$

7. $\frac{1}{2} ab \sin C = \text{Area}$

$$\frac{1}{2} \times 10 \times 18 \times \sin P = 27$$

$$\sin P = 0.3$$

$$P = \sin^{-1}(0.3) = 17.5^\circ \text{ but } P \text{ is obtuse}$$

$$\text{so } P = 180 - 17.5 \\ = \underline{\underline{162.5^\circ}}$$

$$CB = 33.0 \text{ m}$$

$$bb = \frac{12}{\tan 35} = 28.3 \quad CB = \frac{12}{\tan 55} = 17.1$$

$$\text{Bearing of } b \text{ from } c = 90 + \tan^{-1} \frac{28.3}{17.1} \\ = 114.9^\circ$$

9. $AC^2 = 8^2 + 14^2 \Rightarrow AC = 2\sqrt{65}$

$$\theta = \tan^{-1} \frac{7}{2\sqrt{65}} = 23.5^\circ$$

$$BN = \sqrt{(4.5^2 + 6^2)} \\ = 7.5$$

$$\theta_1 = \tan^{-1} \left(\frac{3}{7.5} \right) =$$

$$\alpha = \tan^{-1} \left(\frac{4.5}{6} \right) = 36.9^\circ$$

$$\text{so } \theta_2 = 180 - 36.9 = 143^\circ$$

11. $(AX)^2 = 5^2 + 3^2$ $AX = \sqrt{34}$

$$\theta = \tan^{-1}\left(\frac{5}{\sqrt{34}}\right) = 40.6^\circ$$

let M = midpoint of RQ

$$\alpha = \tan^{-1}\left(\frac{2}{5}\right) = 21.8^\circ$$
